

As a licensed amateur radio operator, callsign N8PKN, I strongly oppose implementation of the BPL system as it now stands.

Because of its structure and frequency allocation the impact on amateur radio use, especially on the worldwide H.F. bands would be devastating.

Amateur radio operators and our systems have stood the test of time in every major disaster from Hurricane Camile to the aftermath of the World Trade Center disaster known to everyone simply as "9-11"

Any system that would even marginally compromise the operations of amateur radio should be seriously questioned.

We, as licensed users should not be fodder for corporate greed. Surely there are different workable solutions that would not be detrimental to other users and systems, including amateur radio.

Please keep our amateur radio frequencies free from interference, they are important to us, as well to this country.
